- Personalized Head-Related Transfer Function (HRTF) Modeling for Spatial Audio
 - * Proposed learning neural field representations for unifying measured HRTFs across existing databases
 - * Mentored a student and proposed a novel position-dependent normalization strategy that effectively mitigates the influence of cross-database differences to improve the learned representation further
 - * Built a deep learning system to predict the spherical harmonic coefficients from anthropometric measurements and scanned head geometry of subjects for HRTF personalization
- Speaker Verification Anti-Spoofing / Audio Deepfake Detection
 - * Generalization Ability: Proposed one-class learning for better detecting unseen spoofing attacks; Mentored a master student working on extending the one-class idea with speaker attractor multi-center one-class learning to maintain speaker diversity in real speech
 - * Channel Robustness: Hypothesized and verified that channel effect is a primary reason for cross-dataset performance degradation, and proposed training strategies to improve the channel robustness for anti-spoofing; Mentored an undergraduate student working on the effect of phase perturbation to improve robustness to unseen channels
 - * Joint Optimization: Proposed a probabilistic fusion framework for spoofing aware speaker verification
 - * Singing Voice Deepfake Detection: Proposed novel task and identified challenges with collected SingFake dataset.
- Audio-Visual Rendering and Analysis
 - * Emotional Talking Face Generation: Implemented and evaluated a baseline method and took charge of the subjective evaluation section, including the Amazon Mechanical Turk (AMT) setup, survey design, and data analysis
 - * Audio-Visual Speaker Diarization: Mentored a student working on audio-visual synchronization and off-screen speakers problem for audio-visual speaker diarization
