ACADEMIC & INDUSTRIAL RESEARCH EXPERIENCE

University of Rochester – Audio Information Research Lab

Aug 2019 - Present

Research Assistant, Advisor: Prof. Zhiyao Duan

Rochester, NY

- HRTF Modeling for Spatial Audio in Virtual and Augmented Reality
 - * Proposed a deep learning system to predict the personalized head-related transfer functions (HRTF) employing anthropometric measurements and scanned head geometry of subjects.
 - * Proposed neural field representations for unifying measured HRTFs across existing databases. We also proposed a generative model for such representation and applied it to HRTF interpolation and generative tasks.
- Speaker Verification Anti-Spoofing / Audio Deepfake Detection
 - * Improved the generalization ability to unseen spoofing attacks with proposed one-class learning.
 - * Hypothesized and verified that channel effect is a primary reason for cross-dataset performance degradation. We proposed training strategies to improve the **channel robustness** for anti-spoofing.
 - * Jointly optimized speaker verification and anti-spoofing with a proposed **probabilistic framework**.
 - * Extended the one-class idea with speaker attractor **multi-center one-class learning** to maintain speaker diversity in real speech.
- Emotional Talking Face Generation
 - * Implemented and evaluated the baseline method and took charge of the **subjective evaluation** section, including the Amazon Mechanical Turk (AMT) setup, survey design, and data analysis, and proved the proposed method exceeds the baseline.
